PROFESSIONAL SUMMARY

Backend Software Engineer working across **Go**, **Python (Django/DRF)**, and **Node.js/Express**, with **PostgreSQL**, **Redis**, and **RabbitMQ/Celery**. Built and shipped production payments, order-management, and ERP/SAP integration systems handling thousands of transactions per hour, plus internal tooling serving 15K+ employees. Comfortable owning features end-to-end with **Next.js** and **React**.

EDUCATION

Indian Institute of Technology, Kanpur

Dual Degree (B.Tech + M.Tech)

WORK EXPERIENCE

K12 Techno Services Pvt. Ltd

June 2025 – Present

Software Development Engineer (Full-time)

- Designed and built **Convo**, an in-house communication tool in **Go** used by **15K+ employees**; engineered a **concurrent** notification service that centralizes alerts from multiple internal systems and delivers them to employees through an in-app bot, with automatic account setup for new users from the existing **ERP** and commands to pull reports from it on demand.
- Revamped the end-to-end OMS (Django/DRF)**, re-architecting order placement, routing, and courier integration for Ekart B2C, Apptymz, and Ekart FCU into a **no-data-loss flow** guaranteeing correct delivery for every order.
- Implemented weight-based routing (<3kg via FCU, heavier via B2C → Apptymz) for bulk, exchange, FOC, and partial-stock orders with parent updates at every stage.
- Hardened the system to sustain **4K+ orders/hour across 120 branches** during PTM by decoupling order, stock-release, and dispatch into idempotent flows, reducing failure rate to under **2%**.
- Owned the store-payments flow driving **78K+ transactions aggregating Rs. 130 Cr** in 3 months; integrated the gateway via webhooks with retry logic and shipped operations dashboards for order and reconciliation visibility.
- Wired **SAP** into the Ekart flow for real-time stock adjustments across all order types; reconciled prior-FY ERP↔SAP drift via one-off scripts, recovering **Rs. 40 Cr** in inventory visibility.
- Integrated **Avanse EMI** enabling students to convert academic and transport fees into installments, with webhook-driven status updates and atomic ERP ledger writes.

Upraised

May 2024 – July 2024

Software Developer Intern

- Engineered a unified **chat interface** consolidating **contract summarization** and **authoring** workflows, cutting context-switching across two prior tools and accelerating document turnaround for legal users.
- Implemented document upload, parsing for contract summarization, and a dynamic questionnaire for contract generation, demonstrating proficiency in complex data flows and **API integrations**.
- Contributed to a **conversational AI** system in **Django** using Azure AI; implemented thread-ids (unique IDs) ensuring context retention across user interactions.

B2Y Infy Solutions Pvt Ltd

February 2024 – May 2024

Associate Software Developer Part Time

- Architected a scalable **multi-tenant e-commerce** backend in **Express.js** supporting **20+ vendor storefronts** on a single unified system, with tenant-isolated data access and shared core services.
- Led 2 engineers in developing **RESTful API** endpoints for real-time **inventory management** and **order processing**, cutting API response times via query optimization and indexing.

PROJECTS

GreenNexus — Environmental action platform | *Express.js, Next.js, RabbitMQ* | [NaveentejaB/gn](#)

March 2024 – Present

- Designed scalable REST APIs in **Express.js** on a **microservice** architecture with layered structure and minimal coupling, enabling independent deploys per service.
- Developed the **Next.js** platform with auth, event & community management, a **challenge-reward** system, and Figma UI/UX.
- Integrated **Leaflet.js** maps with customizable filters, and **RabbitMQ**-based notification and mailing services for engagement.

MiniMax — Video streaming platform | *Next.js, Django, AWS S3, Celery, Redis* | [NaveentejaB/MiniMax](#)

August 2024 – Present

- Engineered a streaming platform with **HLS** transcoding on **AWS S3** and **Redis** caching, reducing average video start time and serving adaptive bitrate playback across devices.
- Architected async transcoding with **Celery** & **Redis**; added **watch history**, **video resume**, and ML-based **recommendations** to drive session length.

SKILLS

Languages: C, C++, Python, JavaScript, TypeScript, Go

Frameworks & Libraries: Django, Django REST Framework, Express.js, Next.js, Node.js, React.js, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Redis, AWS S3

Tools & Platforms: RabbitMQ, Celery, Docker, Git, AWS, Socket.io, L^AT_EX
