PROFESSIONAL SUMMARY

Backend Software Engineer working across **Go**, **Python (Django/DRF)**, & **Node.js/Express**, with **PostgreSQL**, **Redis**, and **RabbitMQ/Celery**. Built and shipped production payments, order-management, & ERP/SAP integration systems handling thousands of transactions per hour, plus internal tooling serving 15K+ employees. Comfortable owning features end-to-end with **Next.js** & **React**.

EDUCATION

Indian Institute of Technology, Kanpur

2020-2026

Dual Degree (B.Tech + M.Tech), Aerospace Engineering

WORK EXPERIENCE

K12 Techno Services Pvt. Ltd

June 2025 – Present

Software Development Engineer (Full-time)

- Owned the **store-payments** flow processing **90K+ transactions** worth **Rs. 130 Cr** in 3 months; integrated the payment gateway via webhooks with retry logic and shipped reconciliation dashboards for finance and operations visibility.
- Integrated **Avanse EMI** as a third-party financing partner to let students convert academic and transport fees into monthly installments, with webhook-driven status updates and atomic ERP ledger writes.
- Revamped the Order Management System (Django/DRF)**, re-architecting order placement, weight-based courier routing, and **SAP** stock-sync across logistics partners into a **no-data-loss flow** guaranteeing delivery for every order.
- Hardened the system to sustain **4K+ orders/hour across 120 branches** during peak enrollment by decoupling order, stock-release, and dispatch into idempotent flows, cutting failure rate to under **2%**.
- Engineered live **GPS tracking** over the **GT06 protocol** for **1200+ school buses**, decoding device telemetry into real-time location updates and customized parent reminders for bus arrival, boarding, and drop-off events.
- Designed and built **Convo**, an in-house communication tool in **Go** used by **15K+ employees**, with a **concurrent** notification service that centralizes alerts from internal systems into an in-app bot, auto-provisions new users from the **ERP**, and serves on-demand reports via commands.

Upraised

May 2024 – July 2024

Software Developer Intern

- Engineered a unified **chat interface** consolidating **contract summarization** and **authoring** workflows, cutting context-switching across two prior tools and accelerating document turnaround for legal users.
- Implemented document upload, parsing for contract summarization, and a dynamic questionnaire for automated contract generation across complex multi-step data flows and **API integrations**.
- Contributed to a **conversational AI** system in **Django** using Azure AI; implemented thread-ids (unique IDs) ensuring consistent context retention across multi-turn user interactions.

B2Y Infy Solutions Pvt Ltd

February 2024 – May 2024

Associate Software Developer Part Time

- Architected a scalable **multi-tenant e-commerce** backend in **Express.js** supporting **20+ vendor storefronts** on a single unified system, with tenant-isolated data access and shared core services.
- Led 2 engineers in developing **RESTful API** endpoints for real-time **inventory management** and **order processing**, significantly cutting average API response times via database query optimization and strategic indexing.

PROJECTS

GreenNexus — Environmental action platform | *Express.js, Next.js, RabbitMQ* | [NaveentejaB/gn](#)

March 2024 – Present

- Designed scalable REST APIs in **Express.js** on a **microservice** architecture with layered structure and minimal coupling, enabling independent deploys per service.
- Developed the **Next.js** platform with auth, event & community management, a **challenge-reward** system, and Figma UI/UX.
- Integrated **Leaflet.js** maps with customizable filters, and **RabbitMQ**-based notification and mailing services for engagement.

MiniMax — Video streaming platform | *Next.js, Django, AWS S3, Celery, Redis* | [NaveentejaB/MiniMax](#)

August 2024 – Present

- Engineered a scalable video streaming platform with **HLS** transcoding on **AWS S3** and **Redis** caching, reducing average video start time and serving adaptive bitrate playback across devices.
- Architected an async transcoding pipeline with **Celery** & **Redis**; added **watch history**, **video resume**, and ML-based **recommendations** to drive user session length.

SKILLS

Languages: C, C++, Python, JavaScript, TypeScript, Go

Frameworks & Libraries: Django, Django REST Framework, Express.js, Next.js, Node.js, React.js, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Redis

Tools & Platforms: RabbitMQ, Celery, Docker, Git, AWS (S3), Socket.io
